TexPure® Industrial Cleaning Wipers

TexPure® Industrial Cleaning Wipers are designed to clean CMP Oxide Slurry in semiconductor fabs. They are also excellent, heavy-duty wipers for cleaning stubborn stains and marks in cleanrooms and other industrial environments. They are highly absorbent cleanroom wipers pre-wetted with ITW Texwipe's TexPure, a surfactant-free, alcohol-free concentrated cleanroom cleaning solution. TexPure is cleanroom packaged in one-gallon polyethylene bottles for general cleanroom maintenance, leaves no residue and is an effective alternative to alcohol-based hard surface cleaners. TexPure has less than 3% VOC content when diluted to 3% with deionized water.

TexPure Industrial Cleaning Wipers re-hydrate oxide slurry deposits for easy removal from CMP tools and surrounding surfaces.

TX1088 features TexTra™, 12" x 12", heavyweight knit, polyester wipers; TX1023 features AlphaWipe® heavy-weight knit polyester wipers and both are pre-wetted with 30% TexPure and 70% deionized water (DIW). TX1023 is a large size (24" x 44") wiper and is ideal for wrapping such vertical surfaces as pipes and equipment supports and for covering floors.

Primary Application:

Cleaning and removing dried oxide slurry residue from process equipment, floors, walls, sub-floors in the fab and sub-fab areas

- Heavy-duty cleanup during maintenance down time
- Part of a standard daily maintenance program to eliminate build-up

Other Uses:

- Excellent cleaner for hard-to-remove stains and marks in critical environments

Features and Benefits

- Easy-to-use reclosable bag
- Pre-wetted wipers eliminate chemical handling, dilution and potential for spills
- Safe alternative to KOH
- Single use packaging reduces storage area restraints
- Customer approved for ISO Class 3 – 5 environments
